foulecomplexe.com

step up!

is an **interactive installation**
allowing to **arrange music** and **lighting**
collectively
by stepping on **luminescent tiles**

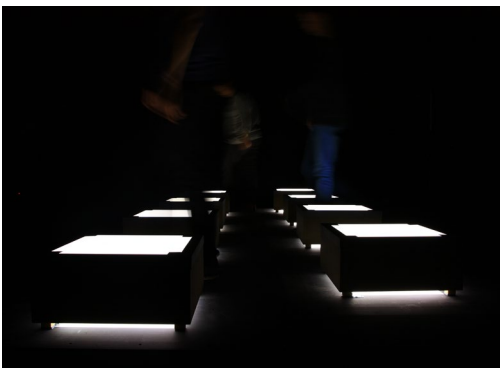

Interaction principles

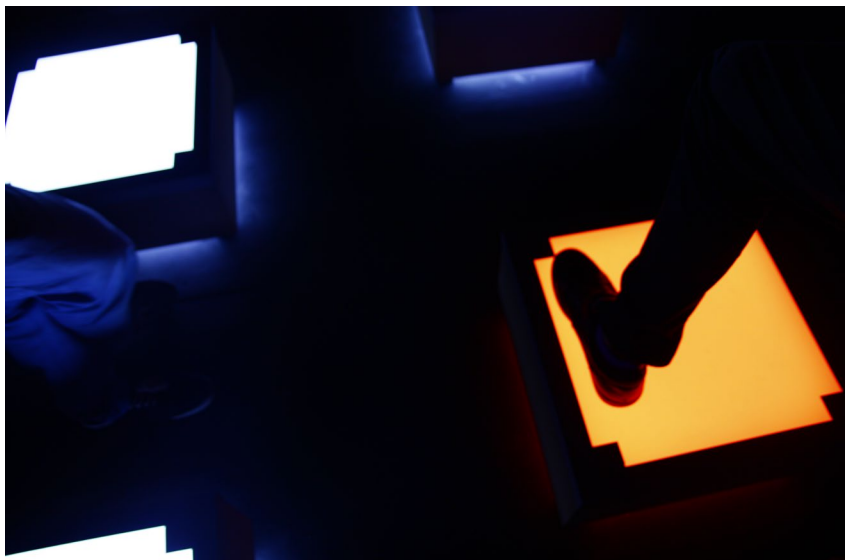

Each tile is linked to a **specific track** (drums, bass, synthesisers...) from one or multiple **musical piece(s)** played around the installation

The luminescent tiles **vary in colour** and **vibrate** along with the specific track that they trigger

The **full piece** can be heard when **all 8 tiles** are being stepped on by participants

When **empty**, the tiles **glow slightly** to stir up people's curiosity

Set-ups

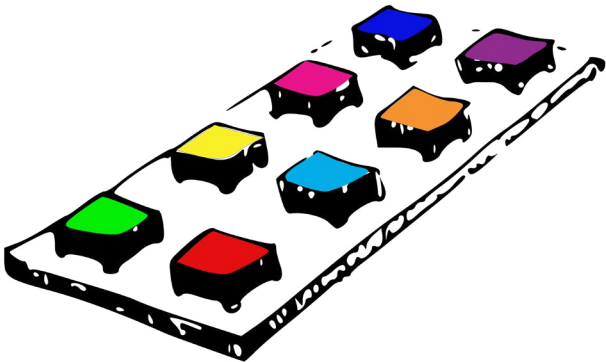

Whatever the set-up is, *step up!*
can be installed either **indoors** or **outdoors**

Small set-up

The luminescent tiles are the **only source of lighting**

Depending on the location, the set-up can be adapted to provide an **immersive experience** for the audience :

- **black box** (stage curtains, stage gaze...) around the installation
- use of a **fog generator**
- **quadriphonic** sound

Large set-up

The luminescent tiles **control the lighting** of a precise location which can be a square, a landmark or a monument

The lighting **reacts** according to the music

The location is **fully lit up** when **all 8 tiles** are being stepped on simultaneously

Technical data

Floor : 4,60 x 2,10 m

1 luminescent tile : 50 x 50 x 20 cm

The luminescent tiles are operated by **LED strips** for **minimal power consumption**

For the large set-up, we favour LED spotlights

A **sheltered master control** (a computer controlling music and lighting) and a **waterproof box** (power supply for the tiles) are set up near the installation

The installation is **weatherproof** for fully efficient outdoor use
